

tested and **certified**

Taking national, European or international standards (NEN, EN or ISO) as a starting point we offer you tailor-made security which fulfils all your requirements.

Through the use of our own unique test centre, a part of our R&D department, we can offer you certainty. We are able to carry out every test possible in extreme situations.

At **aalberswico** we use the following standards:

Intruder resistance

NEN 5096 | EN 1627-1630 | EN 356 | ISO 16936

Ballistic resistance

EN 1522 | EN 1063

Blast resistance

EN 13123 | EN 13124 | EN 13541
GSA (US) | ISO 16933 | ISO 16943

Fire resistance

NEN 6069/EN 13501 | NEN 6075
EN 1634 | EN 1364

ARC

EN 50518

Thinking in solutions. That is the strength of **aalberswico**. We've been doing this for almost fifty years already! Those solutions are nevertheless very varied.

Since it was established in the 1960's, Aalbers has grown to become a versatile group of companies with a total floor area of more than 15,000 m². The various divisions and sister companies specialise in metal products, shop and project fitting, doors and biometric identification and security systems.

security is a specialised field

security at
the right
level

We translate our clients' wishes into the right protection against real risks. **aalbers|wico** develops and supplies custom made security against burglary, bullets, explosions and fire, all of which can be combined to create a single solution. And we construct our structural security products in such a way that they can all withstand real attacks.

doors | walls | counters | sliding and raising windows | entrances | facades | compartments | secondary windows

a secure environment

The correct balance in security

You want to offer people or property a secure environment. A thorough risk analysis is the starting point for this. How great is the likelihood of an attack, explosion or other threat?

Adequate security requires a well thought out path in which all aspects are fine-tuned with each other so that they reinforce each other. The correct balance between OSE (Organisational, Structural, Electronic) security measures and ICT is essential.

Structural security occupies the most important position in providing the correct delay between the moment of detection, alarm and their consequences.

By involving us at an early stage in the path, many clients have already benefited from the correct balance in their security. Your investment provides the greatest return when all aspects of security are in balance.

Where security risks are involved

aalbers|wico is very well known nationally and internationally as the specialist in structural security. We provide specialised solutions which - if the situation demands it - are resistant to the greatest risks.

We distinguish ourselves by our expertise and are at home in many markets:

- museums
- embassies
- alarm centres
- security services
- financial institutions
- high-security buildings
- the petrochemical industry

This sometimes involves standard security, but often involves extreme risks. In situations in which nothing can be left to chance, **aalbers|wico** goes further than the normal standards and regulations.

Benefit from the best solutions

recognise our expertise

Integrity and quality

Our knowledge of certification and standards serves as a guide to guarantee our quality. Training such as DHM Security Management, Security & Technology and IRIS form a thorough basis for this. We understand our profession. The integrity and quality of the company is constantly tested by renowned notified bodies.

No more than necessary

Security is important, but excessive security is undesirable. Based on the Programme Requirements we develop the structural security which offers sufficient protection against the calculated risks.

Aesthetically pleasing

You want to secure your property or collection but you also want to give an aesthetically pleasing and hospitable appearance. We see it as our challenge to integrate security in your premises as discretely as possible. We have wide experience in providing security for properties with monumental heritage.

Advanced technology

Our security solutions are often very well thought-out structures which are far and above the standard. We make use of certified materials such as WGS® and DGS® steel, composites and glass. Through our wide experience and materials expertise we are able to create innovative and well thought-out structures.
