temporary security walls for rapid protection

The M-sec wall system is a modular wall system that is easy to install and dismantle. Ideal for creating a temporary security solution in response to changing situations where individuals require immediate protection. M-sec walls are used in places such as hotels, homes, embassies, offices and airports. Anywhere where the existing protection is insufficient or temporary and/or where the permanent security solution is not available yet.

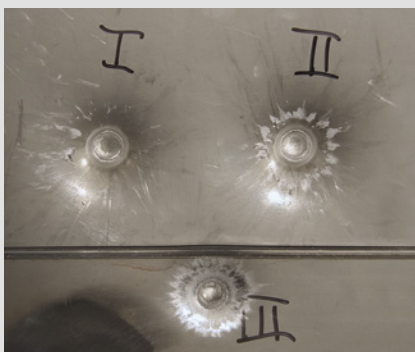

a secure environment

- steel panels
- transparent panels
- door panels
- openable window panels

The M-sec wall system is a stand-alone system that is clamped between floor and ceiling without damaging them. Bullet-proof according to EN 1522 | EN 1063 in various bullet resistance classes. M-sec walls are attractively designed and can be fitted on the inside (safe side) with finishing panels so the walls blend in with the environment.

We use WGS® steel for the best protection possible.

tested
and
certified

Thinking in solutions. That is the strength of **aalberswico**. We've been doing this for almost fifty years already! Those solutions are nevertheless very varied.

Since it was established in the 1960's, Aalbers has grown to become a versatile group of companies with a total floor area of more than 15,000 m². The various divisions and sister companies specialise in metal products, shop and project fitting, doors and biometric identification and security systems.
